

# Risks of COVID-19 Infection

- Direct cytopathic effects to alveolar epithelium, end organs
- Dysregulated immune response
- Mortality rate: ranges from ~ 0.5 to 3%

# Case 1

## Initial Presentation

- Noam Asker is a 28 year old male with PMH schizophrenia is brought to the emergency room from a shelter where he was loudly threatening peers and staff and performing karate moves.
- The shelter he is from is currently suffering from a COVID outbreak.
- The patient is evaluated in the ED and is medically stable. He denies a COVID test and will not wear a mask.
