

# Global vs. Domain Assessments

- Global assessments focus on overall psychosocial risk based on a patient's “total score” across multiple domains
- Domain assessments focus on individual domains, such as
  - psychiatric history
  - substance use/abuse
  - compliance
  - health behaviors
  - quality of social support

# Case 1

## Waiting List Questions

- You wonder how well some of these assessments correlate with patient-centered outcomes, such as mortality.
